FOCCUS I & M Fiber Optic Cleaning Kit

Product# CFK1010

Product Description

In the I&M Fiber Optic Cleaning Kits, Chemtronics has included only the cleaning supplies necessary for making a successful 2.5mm fiber optic connection. The I & M Fiber Optic Cleaning Kit contains one aerosol of Electro-Wash PX Precision Fiber Optic Cleaner, and a QbE Cleaning System for performing the Combination Cleaning procedure.

Use the swabs and wipes with the Electro-Wash PX to clean the fusion splicer, especially the mirror and V-groove. Swabs are also included for cleaning ferrules, alignment sleeves and backplane connections. Electro-Wash® MX Premoistened Wipes are included for tool and cable wiping.

The swabs are packaged in rugged tubes for field operations. The kit bags are made from tough nylon for long life. They are equipped with a carabineer to clip on a tool belt for transport or to clip a cable for convenient access.

Combination Cleaning with the QbE

- Pull one QbE Wipe over the fiber-safe foam platen.
- Hold the end face at a 90 degree perpendicular to the platen.
- Draw the end face lightly from the solvent wetted area to the dry area over the platen, using a smooth linear motion - do not press too hard.
- Do not retrace your cleaning procedure in the same area.
- Do not use a figure-eight motion; do not use a "twist & turn" motion.
- Check your work with a fiber scope or measuring device.

Combination Cleaning Process

For Splice Preparation

- Lightly moisten QbE wipe and gently wipe away fiber contaminants.
- Lightly dampen swab, remove soil from V-grooves on fusion splicer.

Buffer Gel Removal

- Pull three single QbE Wipers out of the container.
- Spray a small amount of Electro-Wash PX Fiber Optic Cleaner into the folded wipers.
- Pull the cable through the first wiper and discard.
- Repeat until the cable "squeaks" clean.
