Optical Power Meter (m0PM-C1)

MAP Series InGaAs and Si Optical Power meter

The Multiple Application Platform (MAP) Optical Power Meter module (mOPM-C1) is a third-generation power meter that brings a range of panel-mount and remote-head configurations to the VIAVI Solutions MAP series.

The MAP Optical Power Meter (mOPM-C1) module extends the optical power measurement capability of the MAP series by offering four grades of optical performance in panel-mount or remote-head configurations with 1, 2, or 4 inputs per module. Designed with 4 unique performance ranges, versions are available for all applications. Models with 110dBm dynamic range are complimented by versions that support 26dBm input power.

The mOPM can be used for numerous applications such as measuring DUT settling time, cross talk, rise and fall times. It can also be used to measure synchronization and insertion loss stability. Also, allows for performance comparison (for example, comparing sequential switching to random switching).

Key Features

- · InGaAs and Si detectors
- Panel-mount or remote-head configuration
- Single-, dual-, or quad-channel configurations available
- 250 kHz sampling rate for high-speed applications
- 750 to 1700 nm operating wavelength range for InGaAs and 800 to 1000 nm for Si
- 110 dB dynamic range and high-power options
- Compatible with single-mode and multimode fiber
- Ability to store up to 100,000 data points per channel

Applications

- · Amplifier characterization
- Receiver and transmitter testing
- Absolute power measurement
- Optical switching time measurement

Compliance

 CE, CSA/UL/IEC61010-1, and LXI Class C requirements (when installed in a MAP chassis)

VIAVI

Product Name:

MAP-Series Dual OPM with general purpose panel mount sensors

Manufacturer Part Number: MOPM-C1PMH2-MPMGP-MO

Functional Description

All four performance grades are based on indium gallium arsenide (InGaAs) detectors and are suitable for applications using single-mode (SM) or multimode (MM) fiber. The fifth variant is based on silicon (Si) detector to provide a more stable response in the 800 to 1000 nm range. The response of the detector varies with the wavelength of the incident light. All versions feature high accuracy, high linearity, and extremely low polarization dependent loss (PDL). The high- and ultra-high-performance grades feature enhanced thermal stabilization. This enhances the wavelength range, enabling 90 dB dynamic range for the high-performance grade and 110 dB dynamic range for the ultra-high-performance grade. The high-power grade extends high-power measurement capability to +27 dBm.

The mOPM uses detectors with intrinsically low uncertainty due to polarization: $<\pm$ 0.01 dB for the Premium-Performance and $<\pm$ 0.015 dB for the General-Purpose detector options. This helps maintain high repeatability in power measurements, virtually independent of the launch polarization of the light entering the detector. In general uncertainty due to polarization is less of a concern for high power measurement applications. Due to the filter element employed for the High-Power detector option, this value is $<\pm$ 0.07 dB.

An intuitive graphic user interface (GUI) is optimized for use in either a laboratory or a manufacturing environment.

Efficient transition between summary and detailed views (figure 1 and figure 2) allow users to operate at a system level or access the full power of a module.

Options and Configurations

The mOPM-C1 is available in four detector types in 1,2 or 4 detectors per cassette. It is also offered in cassette mounted or remote detector option.

	Options	Description		
Detector type	2mm InGaAs General	• Measures power levels from -70 to +11 dBm over the wavelength range of 800 to 1650 nm		
	Purpose	Features high accuracy, very linear behavior and low relative uncertainty due to polarization		
	3mm InGaAs Premium	Measures power levels from -80 to +11 dBm over the wavelength range of 750 to 1700 nm		
	performance	Features high accuracy, very linear behavior and extremely low relative uncertainty due to polarization		
	3mm InGaAs Ultra performance	Measures power levels from -110 to +11 dBm over the wavelength range of 750 to 1700 nm.		
		In addition to the features of the Premium Performance detector, the Ultra Performance detector offers excellent stability for long term measurement of extremely low optical power levels		
		Only available as a panel mount		
	Filtered 2 mm InGaAs High power	Measures power levels from -45 to +27 dBm over the wavelength range of 800 to 1650 nm		
		Features high accuracy as well as very linear behavior		
	Integrated	Measures absolute power Larger input aperture		
	remote heads	 +33dB input power Premium performance and PCT version 80dB dynamic range 		
	Silicon detector power meter	• Measures power levels from +10 to -90 dBm over the wavelength range 800 - 1000 nm		
		Better responsitivity over the 800 - 1000 nm range than inGaAs detectors Ideal for Silicon photonic applications		
Flexible	Cassette- mounted	Detectors mounted directly on the cassette faceplate		
Detector		Configuration, the density available is 1, 2 or 4 detectors per single width cassette		
		Must configure with identical detector type		
	Remote	With electrical connectors to which remote detector heads can be attached		
	detector	Configuration, the density available is 1, 2 or 4 detectors per single width cassette		
		Flexibility with remote heads to mix detector types		

The interface module is compatible with all performance grades of remote heads and can accommodate a mix of performance grades. For example, an application requiring a general-purpose optical power measurement (OPM) and a high-power OPM could be connected to the same remote head base module, thereby reducing the number of slots used in the MAP chassis.

VIAVI

Integrated Remote Heads

The VIAVI integrated remote heads feature a Teflon-based integrating sphere to minimize polarization-dependent loss and access high power. Available as a premium-performance variant and a variant specifically designed for use with MAP-PCT systems, integrated remote heads provide 90° launch and ideal spherical geometry for maximum repeatability. The integrated remote heads can measure high powers of >20 dBm and 80 dB dynamic range that can be used for amplifier and/or pump laser testing. They also provide a larger input aperture that is ideal for high port MPO connectors or duplex connectors. They are Measure IL for high port commendation of the positional variations.

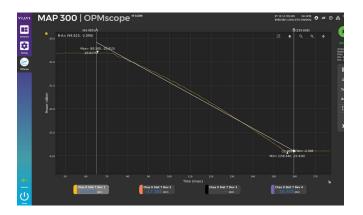

Figure 3 - Integrated Remote Head OPM in MAP-330

Super Application: OPMscope

The OPMscope is a super application designed for use with the mOPM-C1 line of power meters on the MAP-200 and 300 platforms. This software feature is an intuitive tool geared for designers and allows graphical representation of optical signals, much like a digital sampling scope, but in the optical domain. This tool can be used to trigger on rising or falling edges, with the ability to see history using pre-trigger data points. It lets users pan and zoom to see details and monitor transients and exports up to 100,000 captured data for extended analysis from up to four optical heads simultaneously.

The new MAP-300 platform offers an enhanced OPMscope user experience. It allows the user to gather traces from up to 8 mainframes with a maximum offering of 256 devices, while MAP-200 offers only 4 traces. The MAP-300 super application offers enhanced markers and data export.

Chassis and Modular Family

The VIAVI Multiple Application Platform (MAP) is a modular, rack mountable or benchtop, optical test and measurement platform with chassis' that can host 2, 3 or 8 application modules. The LightDirect family of modules are characterized by their simple control and single function nature. Individually or together they form the foundation of a diverse array of optical test applications. The web enabled multiuser interface is simple and intuitive. LXI compliant with a full suite of SCPI based automation drivers and PC based management tools, the VIAVI MAP is optimized for both the lab to manufacturing environments.

The mOPM is part of the LightDirect module family. Alongside the many other modules, such as light sources, polarization scramblers, variable optical attenuators, and spectrum analyzers, the MAP series is the ideal, modular platform for photonic system and module testing.

The mOPM is compatible with all current MAP-300 and MAP-200 chassis.

Recalibration period			1year	
Warm-up time	30 min			
Operating temperature	5 to 40°C	5 to 40°C	5 to 33°C	5 to 40°C
Humidity		15 – 80% relative h	umidity, non-condensing	
Module				
Dimensions (WxHxD)	4.06 x 13.26 x 37.03 cm (1.6 x 5.22 x 14.58 in)			
Weight		1.2	kg (2.65 lb)	
Remote Head				
Cable length	1.4m(4.5ft)			
Dimensions	13.8 cm x 5 cm x 5 cm (5.4 in x 2 in x 2 in) excluding cable			
Weight		0.0	3 kg(1.3 lb)	

 $^{^1}$ For 62.5 μm core fiber, additional uncertainty of 1% (PC) or 2% (APC) must be added due to overfill of 2 mm detector.

 $^{^2}$ Fiber SMF-28, T= 23 $\pm 6^{\circ}$ C, spectral width of source <6 nm, optical power on detector = -20 dBm.

³ SMF 28, N/A of fiber ≤0.27, temperature, humidity, and power range per table.

 $^{^4}$ 1 second averaging time, 300 consecutive measurements (300s), T = 23 \pm 5°C.

 $^{^5}$ All states of polarization, constant power, straight connector, $T=23\pm5^{\circ}C~WL=1550~nm\pm30~nm, MPMHP~at~WL=1310~nm.$

⁶ For 900 – 960 nm only, uncertainty indicated is for 15 – 35°C.

Note that MT connector size prevents the use of adjacent channels. Therefore, a 4-channel cassette only allows 2 MT input at a time.
