Manufacturer:
Viavi

Product Name:
Viavi SmartClass™ HD4i Digital Handheld Video Display with Dual-Mag Patch Cord Module

Manufacturer Part Number:
FBP-HD4IP

Fiber Handheld Solutions

Inspect, Test, Save, and Certify with One Compact Device

Optical fiber is the lifeline in today's networks, therefore, fiber technicians must follow best practices and be able to prove the quality of their work by certifying the network's speed which to build confidence with providers. The new SmartClass™ Fiber Family of optical handheld tools integrate automatic pass/fail certification for inspecting fiber and measuring optical power with one portable device.

SmartClass Fiber devices give technicians ultimate flexibility and performance in one powerful, easy-to-use device that instantly turns them into fiber-smart technicians.

Cut testing and certification time in half and give customers confidence in their network quality at the push of a button with SmartClass Fiber Handheld solutions.

Benefits
- Complete jobs faster, correctly, and on time—the first time
- Eliminate subjective guesswork with pass/fail analysis results
- Easily generate certification reports
- Flexibility for use anywhere!

Features
- Provide certification reports with pass/fail fiber connectivity analysis
- Standardize fiber inspection, analysis, and testing methods throughout the fiber network
- Install, test, and maintain fiber systems where portability is essential, such as in FTTX, BPON/EPON/GPON, FTTA, and data centers

Applications
- Automated pass/fail analysis for fiber inspection and test
- Store all fiber inspection and test results on board
- Easily generate fiber certification reports
- 3.5" color touch screen user interface

Contact the professionals at Fiber Optic Center for a quote or to get more details.

Help Technicians Work *Fiber Smart*

- **Integrate** fiber inspection and test into one efficient, easy-to-use solution that promotes fiber-handling best practices.
- **Automate** fiber inspection and optical power measurement with pass/fail results that eliminate subjective guesswork.
- **Store** test results, images, and user information directly on the device.
- **Follow best practices** with features that incrementally step users through a proper test workflow.

Inspect, Test, Save, and Certify ... on One Compact Device

Inspect	Test	Save and Certify
	Broadband power meter (OLP-82) 	Save results on board 
	PON power meter (OLP-87) 	Generate certification reports Inspect to industry specifications, such as IEC-61300-3-35, without subjective guesswork. Generate automated pass/fail results at the push of a button.	Accurately measure optical power for multiple wavelengths, program pass/fail thresholds, set reference measurements, create custom wavelengths, and link OPM readings to inspection results.	Build customer confidence in work quality with inspection and measurement results you can store on the SmartClass fiber device then later connect to a PC to export the results and generate certification reports.

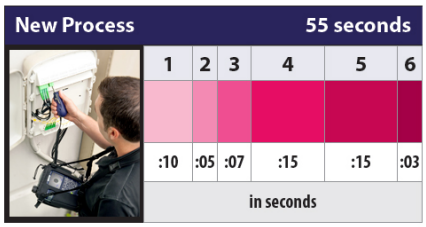
Finish Jobs in Half the Time

Achieving optimized performance requires systematic, proactive methods that many technicians find troublesome and confusing. SmartClass Fiber tools overcome these barriers with essential tools integrated together into a seamless system that is fast, portable, and easy to use.

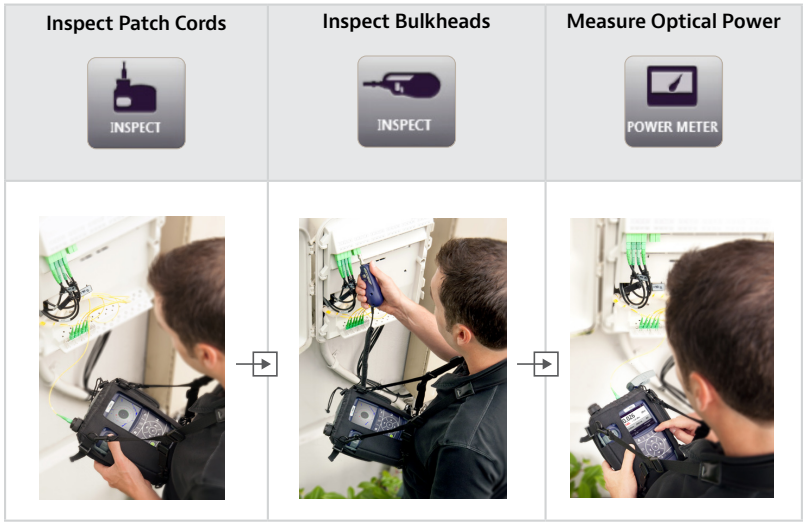
Steps	
1	Inspect patch cord
2	Clean, re-inspect, and save image of the patch cord
3	Inspect bulkhead port
4	Clean, re-inspect, and save image of the bulkhead
5	Measure optical power and save data
6	Move to next port



Drive User Behavior for Best Practices

Every SmartClass Fiber device features an input select key that incrementally steps users through each application as it *should* be used in a proper test workflow. This feature is highly valuable for users of any skill level and guides users with a simple step-by-step repeatable process that is easy to follow and ensures jobs are done right, the *first* time.

- Guides users through a proper test workflow with a simple step-by-step repeatable process that is easy to follow
- Ensures jobs are done right, the *first* time
- Drives user behavior to ensure best practices

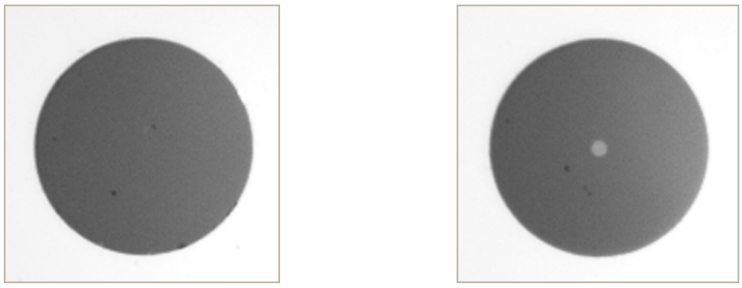


Inspect Fiber End Faces with Pass/Fail Analysis

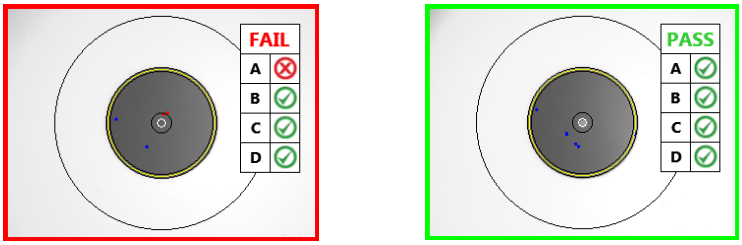
Contaminated connectors are the primary cause for troubleshooting in optical networks which drove the industry and International Electrotechnical Commission (IEC) to release IEC 61300-3-35, a global standard that establishes acceptance criteria for the quality and cleanliness of the fiber connector end face. Comparing fiber connectors to a standard or specification is difficult and time-consuming without the proper tools; however, SmartClass Fiber tools eliminate these challenges. Regardless of the standard or customer-specific requirements, users can easily inspect and certify fiber connector end faces with automated pass/fail analysis at the push of a button.

- Test to specifications without confusion
- Get fast results at the push of a button
- Certify compliance to the industry standard (IEC) or to customer specifications
- Eliminate subjectivity from the measurement process with automated pass/fail analysis

Which of these Connectors Meets the IEC Spec?

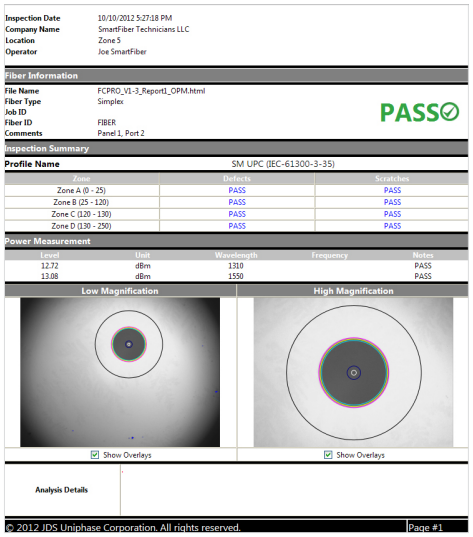


SmartClass Fiber Tools Provide the Answer.



Generate Certification Reports

- Prove work quality.
- Save results for easy recordkeeping.
- Easily export records to PC.
- Print reports or send by e-mail.



Inspection Date 10/10/2012 5:27:18 PM
Company Name SmartFiber Technicians LLC
Location Zone 5
Operator Joe SmartFiber
